AviationManuals has released an online change management form for its ARC Safety Management Software and App. The digital form streamlines, monitors and executes change management within a flight department, such as moving to new hangars, adding aircraft to the fleet or naming a new director of aviation. It helps analyze risks accompanying a substantial change within the department, describes actions needed to implement the change and enables administrators to assign each task to the right individuals.

The screenshot shows a mobile application interface for 'Change Management' on an iPad. The status bar at the top indicates the time is 11:50 AM and the battery is at 78%. The form is divided into several sections:

- Please describe the change:** A text input field with a placeholder 'Add note'.
- What are the potential hazards of this change?:** A text input field with a placeholder 'Add note'.
- Severity and Likelihood:** A section with a dropdown menu set to 'Moderate'. A note below reads: 'To discern the range of consequences that can result from a hazard, two sub-steps are considered: Severity and Likelihood. Select the appropriate category/Severity'.
- Likelihood:** A dropdown menu set to 'Unlikely'.
- Risk Level:** Three buttons: 'Low Risk' (green, selected with a checkmark), 'Medium Risk' (yellow), and 'High Risk' (red).
- Risk Level:** A dropdown menu set to 'Low'.

At the bottom of the form, there are two buttons: 'Save as Draft' and 'Submit'.
