

AviationManuals Expands Offerings with New FBO Manual

Helps Managers and Staff to Improve Professionalism, Standards and Safety Management of their FBO Facilities

Washington, D.C., September 10, 2019 – AviationManuals, the world’s leading provider of aviation manual development services and Safety Management System (SMS) software for business aviation, announced today that it has expanded its Manuals portfolio with a new Fixed Base Operations (FBO) Manual, designed to help managers and staff improve the professionalism, standards and safety of their FBO operations.

“For more than 20 years we have been a convenient and effective resource for helping aircraft operators improve their operations through the development of high-quality manuals. We are now channeling that extensive experience for FBOs,” said AviationManuals CEO Mark Baier. “We will make things easy for FBOs that simply do not have the resources to research, write, and maintain manuals themselves.”

Key operational requirements covered by the [FBO Manual](#) include:

- Internal Policies and Procedures
- Safety Management System
- Environmental and Occupational Health/Safety Guidance
- Facility Operations
- Ramp Operations
- Emergency Operations
- Training Requirements
- Ground Support Equipment Maintenance Control Procedures
- Security Procedures

“Our FBO Manual is particularly helpful for operations with multiple bases and/or multiple shifts. The manual can help standardize FBO operations so that customers receive the same experience no matter who is on duty or what location they fly in or out of,” added Baier. “For small- to mid-sized companies, our FBO Manual can help with everything from procedural standardization to the onboarding of new employees.”
